Bill,

Thank you for your reception report of WCXI on March 3, 1988. I can verify your reception on the date and times you mention. Our power is 50 thousand watts during the day, and 10 thousand watts directional night time. That time span you mentioned was on day pattern therefore atmospheric conditions must have been just right for your reception. The change to night pattern occurs at 6:45 PM EST. On night pattern we have been heard as far as Scandinavia and Holland. I've written letters to those DX fans too. Not too much good stuff to hear on the DX for AM radio these days.

Our exact frequency is AM 1130. We broadcast in stereo utilizing the Motorola system with each part of the transmitter equal to 1.5kw of power. We have a 9 tower directional array which generates kind of an oval pattern on 50 thousand watts, and extreme north at night protecting WNEW in New York, NY and several other stations at 1130. We operate 24 hours a day and serve the entire Detroit area and suburbs. The transmitter site is located south of Detroit in Gibralter, Michigan approximate 25 to 30 miles away from where we originate programming at 2930 East Jefferson in downtown Detroit. We receive several letters a year from DX lovers. Our format for over 12 year nows is country music. Our network affiliation is AP radio and Unistar radio network.

I am enclosing a bumper sticker, and thank you for look for us on your radio dial.

Sincerely,

Dave Anthony
WCXI Radio
Program Director
